32, 64, 128, 256, 512, 1024, 2048, etc UITextureSquasher_1_0_0_0. If for any reason that doesn't work in your system, please try the version with individual files in the folder (UITextureSquasher_1_0_0_0_folder.zip) and comment here. You need .NET 4.0 or higher. The latest version of s4pe will view and retrieve images of UI.package: Photos attached two Willow Creek images of maps from UI.package, a combined bitmap image, and a modified Willow Creek in the game. «img» ... JPG/img' Additional credits: Forums EA and SimGuruModSquad: Everyone who contributed to the s4pi/s4pe Inge to test the previous article Next article This is a complete assignment tool to create user-generated content cas for TS4. This is designed to work with Milkshape 3D and bypass the ms3D use limits for Sims 4 grids, but many features can be done with OBJ files that can be used by almost any grid program. Here's a rundown of features: Cloning Tool - Clone of Game Packages or Custom Clone Package Packages - work with custom content packagesGeneral properties of parts of CAS - properties applied to all recolorsRecolor Manager - properties for each manager recolorPreviewerMesh - Manager of Export and Import GridGeneral Grid Manager - Fix/change. Applied to all meshesMesh Region Manager - kind/change regionsThumbnail Manager - customize custom thumbnailsMesh Tools - assign uv1, etc. from the reference gridConversion: TS4/other - converts TS grids in and out of other formatsSeparate Mesh Layers - creates MS3D or OBJ grid with layers, Divided into groups, mostly useful for alpha-transparency hairGEOM Tools:Examine Mesh - see data in the gridView MeshCombine GEOM grid - combine two TS4 meshClean mesh - remove duplicate verticesMS3D Tools - tools for Milkshape meshesrig Tools - look at the skeleton data Also if you click on the menu tools and include special tools that I found useful for finding game packages. Tutorial: Transforming the TS3 dress into TS4 Tutorial: Transforming TS3 hair into TS4, with alpha transparency This tool is in constant beta state, so check updates, fixes, new features and so on. Issues, error reports, problems, and suggestions for the tool itself should be posted here. Issues and concerns about a particular project should be posted on the TS4 Create/CAS Parts forum. Additional credits: s4pe/s4pi is used by CAS Tools to process packages and images. s4pi/s4pe and CAS tools are open source. s4pe download: the last working source of s4pi: previous article Next article Adds pointed ears at the standard CAS basic ear sliders. Compatible with Basegame. I built this so it shouldn't have any conflicts with Get To Work and Vampires, although it doesn't go down well with alien pointed ears and (I suppose) vampire ears. Not to be in conflict with the unlocked ears of Khitsule unlocked mod. There will be a conflict with any other mod override macro hotSpotControl ears mode. Instructions: Place the package in the Fashion folder as usual. At CAS, choose an ear for editing. Don't go into Micro mode. In terms of side ear, you can pull the point up and/or back. From FRONT and BACK views of the ears, you can still use ear size and ears/in sliders, and the Micro mode stays the same. Tested on game versions 1.30 and 1.31. There's a patch version below which it won't work, but I don't know when the changes were made, so I don't know which one, although I suspect it was a flexible gender patch. Additional credits: EA and SimGuruModSquad forums for information on how CAS sliders work. Work.
